Captrad have a full range of WPC cladding and decking products that can enhance any working environment.. Our Wood-Plastic Composite (WPC) hard wood decking material is manufactured from a combination of plastic, natural fiber and some additives using special equipments. It mixes natural fiber and plastic perfectly to keep the natural impression of wood but with rich colours of plastic. It has gradually replaced wood and plastic, getting widely used in more and more fields.

Manufacture and material Performance:

Comparing to wood, plastic and other composite products, WPC deck and railing products have the following feature:

- Elegant nature wood grain texture and touch
- Elegant and detailed shape design
- Resistant to cracking and splitting
- Anti-water and moisture, acid, alkali and pest resistance
- Environmental friendly and no other hazard chemical
- Safe to use for many years
- Low maintenance and Never needs painting ,But also can be painted
- Carpenter oriented and friendly easy installation and Quick to install saving on labour costs
- UV resistance, Fade resistant
- Durable
- Dimension stability against moisture and temperature
